- Family planning and counseling
- Testing of HIV and AIDS

The available family planning methods include:-

- The use of Pills
- Injections
- Use of condoms

Both dispensaries have really served a great role of helping and treating patients freely. For example the school dispensary has taken the responsibility of deworming children frequently ie.

At least after 3 months and also by giving of vitamin A. in fact the availability of essential drugs has enabled many patients to be treated more especially those ones who can't afford to buy expensive drugs from the private chemist and clinics.
